CMSS Position on International Collaboration in Medicine

The undersigned members of the Council of Medical Specialty Societies (CMSS) are concerned that the recent executive order suspending some foreign entry into the United States will have a negative impact on patient care, medical research, the education of health professionals, and international scientific collaboration. Tens of thousands of people from more than 100 countries come to the United States each year to exchange ideas to improve patient care throughout the world. Progress against disease will falter if the global community engaging together in medical care is divided by policies that bar members of certain nationalities from entering the United States to deliver patient care, conduct research, participate in medical education and engage in scientific discourse. We call on national leaders to eliminate barriers to scientific exchange and medical education.
